ENABLING DATABASE MANAGEMEANT AT THE EDGE

Every organisation depends upon a database for structured data management, be that a CRM, contact, delivery, stock holding or sales database to name a few, this is typically the foundation that many business critical applications depend upon.

Managing databases requires expertise to ensure that everything is operating optimally, backups are completed and data is recoverable in the event of disaster.

For many organisations, these skills may not be available, resellers and service providers need to have these skills too. The answer for many organisations has been to push their database systems into a Hyperscaler cloud environment, but what if your application needs lower latency, data sovereignty needs or other regulatory compliance, can you meet these needs on-premises or via an edge cloud location?

MAYBE YOU HAVE SOME OF THE FOLLOWING CHALLENGES:

- On-premises or in country data residency for legal or compliance reasons.

- Local High Performance Database requirements to meet application needs.

- Lack of Database skills in-house.

- Need proactive 24x7x365 Database management and support for critical applications.

- Want to focus on your core business skills, not database management

- Baseline systems to ensure the needs of a business are met continually

- Need best practice advice and regular patch management to secure the data from breaches.

- Need access to Security Cleared Database Administrators (DBAs)

- Need flexibility to add bespoke consultancy as needs change

KEY USE CASES

- Sovereign Database Management
- Modern Application Delivery
- Data Transformation at the Edge
- Business Intelligence Applications and AI

Not all Databases and Database Management Services are equal, one size does not fit all. You can bring the application to where your business needs it, on-premises or hosted via the Zadara Edge Cloud ecosystem of partners. Combine the Zadara IaaS platform capabilities with Node4 Database as a Service capabilities to help you address your business needs in any location.

Channel Partners can aggregate their additional services with a complimentary Database Management Capability, built on top of Zadara's IaaS and offer a more bespoke and customer driven service to their enterprise customers. Innovation requires you to think differently!

SOLUTION DETAILS

Combine Zadara IaaS capabilities with Node4 Database as a Service (DBaaS) to enable a Secure Database Management Solution, on-premises or in a hosted environment globally. Enable existing or new application deployment to drive innovation utilising expert skills, without hiring or training additional people. Focus on your core business and sleep at night knowing you have employed experts to manage your business's critical application database needs. When your business demands more than just a self service portal or an off the shelf deployment, think differently, act differently, then your outcome will be different.
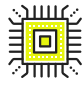

SIMPLIFIED DATABASE APPLICATION DEPLOYMENT

ZADARA EDGE CLOUD   FULLY MANAGED IAAS

ISV, Business Applications or Open Source Frameworks	Asterix DB	Apache Bloodhound	DORIS	THE APACHE SOFTWARE FOUNDATION	NGINX

On-premises and cloud compute	CONTAINER STORAGE INTERFACE	COMPUTE	BACKUP	VPC	LOAD BALANCER	CPU

On-premises and cloud storage	BLOCK STORAGE	FILE STORAGE	OBJECT STORAGE

WHY ZADARA AND NODE4

ABOUT ZADARA

Zadara provides an industry leading AWS compatible IaaS solution that can be delivered in a location of your choice, with flexibility to meet different business needs around compute, storage and networking resources in a secure multi-tenant environment. Node4 compliments this by building on this ecosystem a secure Database as a Service capability to suit your individual needs.

Together we build a better outcome for your business application needs.

ABOUT ZADARA

Zadara Sovereign AI Edge Cloud - simplifies operational complexity enabling Service Providers and modern Enterprises to deliver scalable distributed compute and data services providing the building blocks for modern applications. With over 500 AI-enabled clouds deployed worldwide, Zadara Sovereign AI Edge Cloud gives access to on-demand, pay-per-use compute, networking, and storage that works with any data type, and any protocol, in any location, ensuring partners and the Enterprise maintain a competitive edge.

ABOUT NODE4

Node4 is a Managed Services specialist working in partnership with Zadara to offer a comprehensive suite of services to support partner organizations, ranging from Connectivity, Infrastructure, Data and AI, Modern Work, Security and Application Innovation. Node4 deliver Consulting services for best practice implementations through to 24*7 Managed Services for ongoing operational support and system optimisation. This combination of services enables our Partners to derive maximum long-term value from their client solutions.
